

Methodology Document PPT 1:

In the case study we have used Jupiter notebook to perform initial analysis of the data and Tableau for data analysis and visualization.

Initial Analysis using Jupiter Notebook: Data Set Used: AB_NYC_2019.csv

Number of Rows: 48895

Number of Columns: 16

```
# Import the necessary libraries
import warnings
warnings.filterwarnings("ignore")
import numpy as np
import pandas as pd
import matplotlib.pyplot as plt
%matplotlib inline
import seaborn as sns
```

```
# Data conversion and Understanding
airbnb = pd.read_csv("AB_NYC_2019.csv")
airbnb.head(5)
```

| | id | name | host_id | host_name | neighbourhood_group | neighbourhood | latitude | longitude | room_type | price | minimum_nights | number_of_reviews |
|---|------|--|---------|-------------|---------------------|---------------|----------|-----------|-----------------|-------|----------------|-------------------|
| 0 | 2539 | Clean & quiet apt home by the park | 2787 | John | Brooklyn | Kensington | 40.64749 | -73.97237 | Private room | 149 | 1 | |
| 1 | 2595 | Skylit Midtown Castle | 2845 | Jennifer | Manhattan | Midtown | 40.75362 | -73.98377 | Entire home/apt | 225 | 1 | |
| 2 | 3647 | THE VILLAGE OF HARLEM....NEW YORK! | 4632 | Elisabeth | Manhattan | Harlem | 40.80902 | -73.94190 | Private room | 150 | 3 | |
| 3 | 3831 | Cozy Entire Floor of Brownstone | 4869 | LisaRoxanne | Brooklyn | Clinton Hill | 40.68514 | -73.95976 | Entire home/apt | 89 | 1 | |
| 4 | 5022 | Entire Apt. Spacious Studio/Loft by central park | 7192 | Laura | Manhattan | East Harlem | 40.79851 | -73.94399 | Entire home/apt | 80 | 10 | |

```
# Check the rows and columns of the dataset
airbnb.shape
```

```
(48895, 16)
```

- The dataset contains 48895 rows and 16 columns
- Now we have to check whether there are any missing values in the dataset

```
# Calculating the missing values in the dataset
airbnb.isnull().sum()
```

```
id                0
name              16
host_id           0
host_name        21
neighbourhood_group 0
neighbourhood     0
latitude          0
longitude         0
room_type         0
price            0
minimum_nights    0
number_of_reviews 0
last_review      10052
reviews_per_month 10052
calculated_host_listings_count 0
availability_365  0
dtype: int64
```

```
# Now we have the missing values, there are certain columns that are not efficient to the dataset
airbnb.drop(['id', 'name', 'last_review'], axis = 1, inplace = True)
```

```
# View whether the columns are dropped
airbnb.head(5)
```

| | id | name | host_id | host_name | neighbourhood_group | neighbourhood | latitude | longitude | room_type | price | minimum_nights | number_of_revie |
|---|------|--|---------|-------------|---------------------|---------------|----------|-----------|-----------------|-------|----------------|-----------------|
| 0 | 2539 | Clean & quiet apt home by the park | 2787 | John | Brooklyn | Kensington | 40.64749 | -73.97237 | Private room | 149 | 1 | |
| 1 | 2595 | Skylit Midtown Castle | 2845 | Jennifer | Manhattan | Midtown | 40.75362 | -73.98377 | Entire home/apt | 225 | 1 | |
| 2 | 3647 | THE VILLAGE OF HARLEM...NEW YORK! | 4632 | Elisabeth | Manhattan | Harlem | 40.80902 | -73.94190 | Private room | 150 | 3 | |
| 3 | 3831 | Cozy Entire Floor of Brownstone | 4869 | LisaRoxanne | Brooklyn | Clinton Hill | 40.68514 | -73.95976 | Entire home/apt | 89 | 1 | 2 |
| 4 | 5022 | Entire Apt. Spacious Studio/Loft by central park | 7192 | Laura | Manhattan | East Harlem | 40.79851 | -73.94399 | Entire home/apt | 80 | 10 | |

- We removed the columns like Id, Name, Last Review which was not giving much information.

```
# Now reviews_per_month contains more missing values which should be replaced with 0 respectively  
airbnb.fillna({'reviews_per_month':0},inplace=True)
```

```
airbnb.reviews_per_month.isnull().sum()
```

```
0
```

```
# There are no missing values present in reviews_per_month column  
# Now to check the unique values of other columns'  
airbnb.room_type.unique()
```

```
array(['Private room', 'Entire home/apt', 'Shared room'], dtype=object)
```

```
len(airbnb.room_type.unique())
```

```
3
```

```
airbnb.neighbourhood_group.unique()
```

```
array(['Brooklyn', 'Manhattan', 'Queens', 'Staten Island', 'Bronx'],  
      dtype=object)
```

```
len(airbnb.neighbourhood_group.unique())
```

```
5
```

```
len(airbnb.neighbourhood.unique())
```

```
221
```

Step 2: Data Wrangling:

- Checked the Duplicate rows in our dataset and no duplicate data was found.
- Checked the Null Values in our dataset. Columns like name, host-name, last review and review-per-month have null values.
- We've dropped the column name as missing values are less and dropping it won't have significant impact on analysis.
- Checked the formatting in our dataset.
- Identified and review outliers.

Data Analysis and Visualizations using Tableau:

We have used tableau to visualize the data for the assignment. Below are the detailed steps used for each visualization.

1) Top 10 Host:

- We identified the top 10 Host Ids, Host Name with count of Host Ids using the tree map.

2) Preferred Room type with respect to Neighbourhood group:

- We created a pie chart for understanding the percentage of room type preferred w r t neighbourhood group
- We added Room Type to the colours Marks card to highlight the different Room Type in different colours and count of Host Id to the size

3) For Variance of price with Neighbourhood Groups:

- We used a box and whisker's plot with Neighbourhood Groups in Columns and Price in Rows.
- We changed the Price from a Sum Measure to the median measure.

4) Average price of Neighbourhood groups:

- We created a bubble chart with Neighbourhood Groups in Columns and Price column in Rows.
- We added the Neighbourhood Groups to the colors Marks card to highlight the different neighbourhood Groups in different colors. Also Put Avg price in Label.

5) Customer Booking w r t minimum nights:

- We created the bin for Minimum nights as shown below.

- The bins were used to display the distribution of minimum nights based on the number of ids booked for each neighbourhood group.

6) Popular Neighborhoods:

- We took neighbourhood in rows and sum of reviews in column and took neighbourhood groups in colour.
- We used filter to show Top 20 neighbours as per the sum of reviews.

7) Neighbourhood vs Availability:

- We created a dual axis chart using bar chart for availability 365 and line chart for price for top 10 neighbourhood group sorted by price.

Methodology Document PPT 2:

1) Room type with respect to Neighbourhood group:

- We created a pie chart for understanding the percentage of room type preferred w.r.t neighbourhood group
- We added Room Type to the colours Marks card to highlight the different Room Type in different colours and count of Host Id to the size

2) Customer Booking with respect to minimum nights:

- We created the bin for Minimum nights as shown below.

- The bins were used to display the distribution of minimum nights based on the number of ids booked for each neighbourhood group.

3) Neighbourhood vs Availability:

- We created a dual axis chart using bar chart for availability 365 and line chart for price for top 10 neighbourhood group sorted by price.

4) Price range preferred by Customers:

- We have taken pricing preference based on volume of bookings done in a price range and no of Ids to create a bar chart. We have created bin for Price column with interval of \$20.

5) Understanding Price variation w.r.t Room Type & Neighbourhood:

- We created Highlights Table chat by taking Room Type in rows & Neighbourhood Group in column.
- We took the average price in colour Marks card to highlight the different Room Type in different colours.

6) Price variation w r t Geography:

- We used Geo location chart to plot neighbourhood, neighbourhood Group in map to show case the variation of prices across.

7) Popular Neighborhoods:

- We took neighbourhood in rows and sum of reviews in column and took neighbourhood groups in colour.
- We used filter to show Top 20 neighbours as per the sum of reviews.

8) Tools used:

- Data cleaning and preparation: Jupyter notebook – Python
- Visualization and analysis: Tableau
- Data Storytelling: Microsoft PPT
